Our goal:

The main goal of movi.finance is to provide an opportunity for anyone, anywhere in the world, to invest from \$ 1 in a real business and get maximum income from their own investment.

Why is it safe?

The main advantage of movi.finance is that we invest all our funds in real business. We receive income from this business, and from the income we have the opportunity to redeem our own tokens. The popular crypto currencies of the world are not backed by the company's income, while we will always buy back our own tokens! We do not invest investors' funds in any one specific business where there are risks of non-receipt of income, our investments will be distributed among various industries and activities. We do not re-invest in any other crypto currencies, since our investors themselves are able to do this without us, our task is to receive a constant stable income, due to which we can redeem movi tokens.

Why is it beneficial:

Investors invest insignificant amounts of \$ 1 and at the same time have the opportunity to get the maximum return on such an investment. By investing in one company, you will receive a certain income, but by investing in a group of companies, this income will multiply. Due to the minimum initial investment, you can get the maximum income in the future.

Where do we invest:

The main purpose of the investment is a profitable business in the form of offline retail and online trade, also one of the main directions of the company language is the development of the movi social network, which will be supportive of the crypto industry and completely open to all kinds of discussions of both existing and new crypto currencies and blockchain. ... On the basis of the social network, we plan to integrate a personalized e-wallet with the possibility of staking in real time, as well as receiving a discount on all types of services, or paying for any company services using cryptocurrency, both online and offline.
