

WAIV Whitepaper

Providing natural disaster supplies to communities worldwide

Natural disasters occur all over the world and come in various forms. Hurricanes, tropical storms, typhoons, floods, mudslides, wildfires, the list goes on of natural occurrences in nature that heavily impact and change the lives of millions of people every year. According to surveys done in 2020, natural disasters caused over \$210 billion in damage, with just a small percentage of that being insured. WAIV is setting out to assist communities in the rebuilding process by helping with tangible goods and hands-on assistance. Through strategic supply distribution and logistics partnerships, WAIV will build supply caches in commonly impacted areas across the globe. Supplies will also be kept on hand for disbursement as needed if a natural disaster is to occur where we do not yet have supplies or need to send more.

What makes this product unique?

WAIV was founded on the premise of being able to provide tangible goods to a specific cause, as well as being designed to be a long-term sustainable project and business. Rather than just sending money to other charities, WAIV will be providing actual supplies and labor assistance to areas in need. The tokenomics and fees of WAIV are designed differently than other projects in the fact that the total supply burn is controlled so there cannot be a parabolic deflation in token supply. Token holders are also rewarded through reflection funds that are a small part of each transaction fee. WAIV's low total transaction fee (0.8%) is much more efficient than other projects as it incentivizes users to trade without the need of a large market shift in order for the trader to be profitable. WAIV will operate as transparent as possible through the use of NFTs, community involvement and events.

How will this project be sustainable in the long term?

Sustainability is built into our business model, that is why we ensured to have sustainable fees in our tokenomics. One of the biggest advantages of the way WAIV is designed is the controlled burn mechanism. Out of the 0.8% total transaction fee, 0.1% that goes to charity will be set aside to burn at a maximum of 10% of total token supply per year. These events will happen throughout the year by sending to the smart chain burn address. Reflection that is absorbed by any of the locked wallets will be released to the community in form of events as they unlock. Utilizing sustainable and transparent business practices will attribute to the success of WAIV.

Why choose us over other competitors in the field

WAIV was designed to be an actual long term sustainable charity token project with real services, not just the promise of monetary donations. We really want to help people all over the world! Many other charity token projects are designed with unsustainable fees that just benefit the project developers and their charity fund. Those inflated fees make it extremely difficult to transact with and trade on the blockchain and promote longevity. WAIV has an incredibly low transaction fee to incentivize use and long-term adoption, as well as a systematic approach to the charity funds so there will not be massive spikes in sell volume causing drastic price action. There will not be any timing of tops and bottoms for WAIV, but rather a more consistent pressure in very small amounts throughout the day so the impact is negligible.

Once per day, the volume of tokens from the previous day that entered the charity wallet will be sold at a random time. These funds will be used 100% towards charity.

Due to the amount of volume of tokens that were traded the first nine days, this volume will be spread over the next thirty days to help reduce price impact of the charity tokens.

ROADMAP

Q3 2021

- Target area organizational partnerships started
- Non-perishable supplier partnerships secured
- Manufacturing partnerships secured
- Supply distributors secured
- Aggressive marketing partnerships
- Ecommerce launch
- Token audit
- Begin sending supplies to first destination partner
- Coinmarketcap, Coingecko listings

Q1 2022

- Begin utilizing NFTs to assist in overall transparency and community development
- Increase dedicated island partnerships to a minimum of 4 locations
- Broaden scope of supplies and aid in serviced areas
- Establish physical footprint in service areas including safe storage for goods stored outside of local organizational area
- Research remote location assistance for areas that are harder to supply and travel to
- Additional exchange applications

Q3 2022

- Partner with two more "tier one" locations for a minimum of 6 service areas
- Begin to establish physical infrastructure in one more area for a minimum of two areas
- Assist in remote location relief that are more difficult to reach

Q4 2021

- Additional exchange applications
- E-commerce item expansion
- Local warehousing secured
- Implement community voting standards
- Secure second destination partner

Q2 2022

- Apply for non-profit organization status
- Work with missionary organizations to help assist in providing increased support outside of labor relief
- Aid local economy in established physical locations by hiring local workers to assist in operational development
- Create partnership(s) with remote locations that are harder to reach and typically receive less aid

Operations

WAIV will be involved in worldwide natural disaster relief through strategic distribution and logistics partners, with all operational expenses going toward the cause. We will be partnering with medical supply distributors, non-perishable food distributors, textile manufacturers, as well as other relief and missionary groups to help assist in both supplies and on-site assistance. Starting off we will focus on support with supplies, and as we begin to grow, we will work into non-perishable goods. Our goal is to maintain as sustainable of a supply chain as possible to maximize the amount of supplies we can help with. This will heighten the impact of WAIV on communities worldwide.

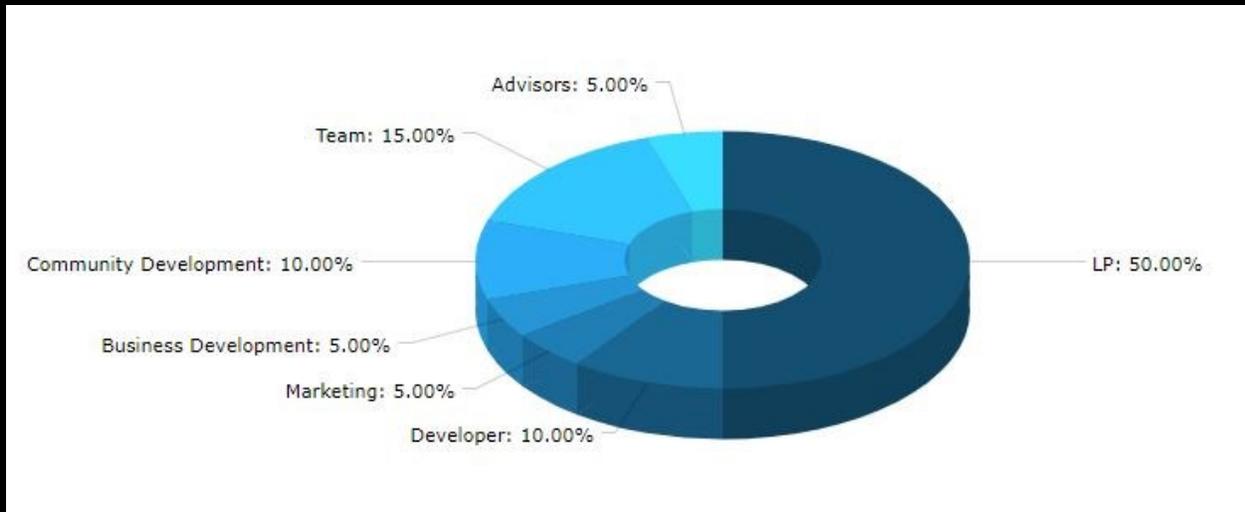

Tokenomics

0.6% of each transaction will enter a charity wallet. Rather than selling these tokens in huge batches that will drive the price down, the 9-day average volume will be utilized and sold over the 24 hour period so there are no timing of tops and bottoms.

0.2% of each transaction will be reflected to all wallet holders. As reflection fees are collected by locked wallets, they will be released to the community in form of different events.

0.1% of the 0.6% will be used as a controlled burn to regulate the number of tokens burned in a period of time rather than per transaction. This controlled burn will allow a maximum of 10% token supply to be burnt yearly. This prevents the risk of parabolic supply burn which is highly possible on tokenomics that incorporate a per transaction burn rate.

Token distribution:

Total token supply: 1,000,000,000

Contract Address: 0x000x0000 to be updated

Charity Wallet Address: 0x000x000 to be updated

Token release schedule (compared to total supply):

Developer: 2% unlocked after 6 months, 1% per month after

Marketing: 2% unlocked at launch, 1% per month after

Business Development: 2% unlocked at launch, 1% per month after

Community Development: 2% unlocked at launch, 1% per month after

Team: 3% unlocked after 6 months, 2% unlocked per month after

Advisors: 1% unlocked after 6 months, 1% per month after
