

QIEX CREDIT POINTS

FOREWORD

In 2009, a new thing called bitcoin was born, marking the advent of a new financial era. Over time, technology development, more capital inflows, the entire ecosystem and scale are growing.

Based on the consensus of the market, more and more valuable assets are digitized, transferred through different networks, and exchanged and traded through different places. This is a financial sector that is innovative in an extremely open market economy.

QIEX digital asset trading center provides global online business services such as digital asset trading, depository and redemption, as well as technical and service support. In July 2018, the QIEX team released QIEX digital asset access standard version 1.0 and QIEX digital asset risk rating standard.

In such an extremely open innovation market, the risk control and credit system is particularly important. QIEX strictly follows the standards in the process of digital asset access, dynamic rating, delisting, etc., So that standards are open, processes are open, and results are made public.

QIEX credit point (qi) is a universal credit score based on the

qiex business system. It also takes into account multi-directional uses such as market, credit and reward points. It is used for multi-party credit consumption certificates of platforms, users, communities and projects.

QIEX has a professional development technical team, financial product team and technical security experts, committed to providing investors with safe, fast and stable digital asset trading services. QIEX has more technological innovations and financial innovations, providing a multi-transaction transaction transfer service that integrates encrypted digital currency, Token and other asset digital certificates.
